

---

## Score and Description

### **Extensive**

Responses considered to be extensive use information from the text and prior knowledge to support similarities and differences between sharebot and human behavior. These descriptions go beyond isolated behaviors and discuss how sharebots and humans cooperate as they work in groups.

### **Essential**

Essential responses describe human behavior that is similar to or different from sharebot behavior and refer to information from the text and/or prior knowledge. However, these responses may only focus on the nature of the work performed by sharebots and humans.

### **Partial**

These responses do not make an explicit comparison between sharebot and human behavior. They may provide some information from or reference to the text about either sharebot or human behavior.

### **Unsatisfactory**

These responses demonstrate little or no comprehension of the similarities or differences between sharebot and human behavior. They do not cite an example of sharebot behavior from the article and do not describe a situation in which people behave in a way that may be considered to be similar to sharebot behavior. These responses often consist of an opinion about sharebots with no reference to the text.
